Exercise 13.2: Using info

- Enter the **info** help system for **gcc** by doing:

  ```
  $ info gcc
  ```

- If you type **?** (or **H** depending on **info** version) a screen will be brought up detailing the various key bindings and commands you can type.

- For example suppose you want to examine optimization levels that can be invoked. You can search forward either by hitting / or **s** and typing in the string `optimization`.

- Navigate around to different levels, search for other items and familiarize yourself with the **info** system.
